

Bothered by the symptoms of an enlarged prostate?

A man with thinning hair, wearing a dark blue and red striped shirt, is seen from behind, looking at a green chalkboard. The board has the main headline written on it.

The latest innovation in Prostate Therapy is here!

Benign Prostatic Hyperplasia (BPH) or enlarged prostate, is a common & treatable condition generally in older men, which leads to uncomfortable urinary symptoms like:

- urgency or dribbling/leaking
- frequency of urination, especially at night
- weak or interrupted stream

Traditional treatment has included costly medications & surgery.

Green Light Laser Therapy is a new, minimally invasive option for treatment of BPH. This treatment is suitable for almost all men with prostate enlargement who require surgery or who are not responding to medication. The benefits of **Green Light Laser Therapy** over traditional surgery include less bleeding & a quicker recovery.
